## EXPERIENCE

---

### Amplitude

San Francisco, CA

*Intern → Product Engineer II*

*May 2022 – Present*

Over four years at Amplitude, grew from intern to Product Engineer II while helping shape the company's core analytics experience. Designed and built systems that make complex data analysis intuitive and reliable, bridging user intent with technical computation across products like Data Tables, Metrics, and AI-powered chart interfaces. Worked across the full stack, primarily in React and TypeScript, with contributions to GraphQL and back-end configuration to deliver resilient, human-centered tools. Partnered closely with product managers, designers, and customers to translate analytical precision into simple, trustworthy workflows, from early prototypes to large-scale rollouts.

- Built and maintained **core analytics features** such as Data Tables, Metrics, and Chart Controls, enabling users to define analytical queries through intuitive UI controls reused across multiple product areas.
- Led feature development for **pre-built analytics experiences ("Hubs")**, including the Marketing, Product, and Ad Performance Hubs, translating business-specific needs into guided analytical flows.
- Independently developed **Out-of-the-Box Metrics** to give users default insights without setup, improving onboarding and product accessibility.
- Co-created **Chart Chat**, an AI-powered interface that lets users modify charts through natural language, later expanded into the company's **Global Chat** initiative integrating LLMs and MCP servers.
- Implemented and maintained **system improvements** such as Dark Mode (via new GraphQL endpoints), library upgrades (Ag Grid migration), and search/filter enhancements to streamline everyday workflows.
- Managed **feature rollouts** with feature flags, supported reliability as an **on-call engineer** (debugging Cypress tests, managing deploys, coordinating rollbacks).
- Collaborated directly with product and design to refine complex UX by adding warnings, bulk actions, and multi-select to reduce friction and increase clarity in analytical tools.
- Conducted **customer calls and bug safaris** to uncover usability issues and propose design or technical solutions aligned with real-world needs.
- Mentored and onboarded engineers; contributed to cross-org efforts such as pricing and packaging updates.
- Grew from front-end specialist to full-stack contributor, integrating **LLM, GraphQL, and back-end configuration work** into the analytics ecosystem while maintaining a strong user-experience orientation.

### Halo Science

Chicago, IL

*Developer Intern*

*May 2021 – August 2021*

Halo is a startup focused on pairing researchers to various funding sources. Contributed by implementing features and designs at the direction of the CEO or UX designer, fixing bugs, and setting up developer productivity tools like Storybook and Chromatic. Developed a new React component library to reduce code redundancy and wrote Python web scraping scripts for the marketing team.

### Materials Simulation Toolkit Machine Learning (MAST-ML)

Madison, WI

*Member*

*June 2020 – December 2021*

MAST-ML is an open-source machine learning Python package with a focus on the material sciences. Contributing to the tool by implementing various functionality proposed by supervisor Dr. Ryan Jacobs, including data-twin removal to improve model performance, graphs to summarize classification models, and exploration of gp-learn library and other feature generation methods.

## EDUCATION

---

### University of Wisconsin-Madison

Madison, WI

B.S. Major in Computer Science | B.S. Major in Data Science

*August 2019 – May 2022*

Major GPA: 3.95 | Cumulative GPA: 3.75 | Dean's List 3 semesters

## SKILLS AND INTERESTS

---

**Programming:** Java, Python, JavaScript, HTML, CSS, C, R

**Technologies:** React, Node.js, Jekyll, Git (CLI), Storybook & Chromatic, LaTeX, Tableau

## PROJECTS

---

Projects selected to show a variety of project topics and programming languages. Check out more on my [website](#) or [GitHub](#).

- **Personal Website:** Set up my website using Jekyll and wrote Python scripts to scrape GitHub (Jekyll, Liquid, Python).
- **Work Visualization:** Visualized a year of self-reported data on where I spent my time working (R, D3.js).
- **Antibiotic Visualization:** Made a static visualization that effectively communicates antibiotics data. (R, Tableau, Figma).
