EXPERIENCE

MAterials Simulation Toolkit Machine Learning (MAST-ML)

Madison, WI

Member

June 2020 - Present

MAST-ML is an open-source machine learning Python package with a focus on the material sciences. Contributing to the tool by implementing various functionality proposed by supervisor Dr. Ryan Jacobs. Tasks include:

- Data-twin removal to help improve model performance (**Python**).
- Support for various graphs for classification models (**Python**).
- Exploration of gp-learn library and other feature generation methods (Python).

Halo Science

Chicago, IL

Developer Intern

May 2021 – August 2021

Halo is a startup focused on pairing researchers to various funding sources. Contributed by implementing features and designs at the direction of the CEO and UX designer and fixing bugs. Other highlights below:

- Setup the Storybook and Chromatic software tools to help frontend development and to encourage adherence to component-driven design (Storybook, Chromatic).
- Developed a new consolidated component library to reduce redundancy of code (React, styled-components).
- Wrote web scraping python scripts to aid marketing team (**Python**).

EDUCATION

University of Wisconsin-Madison

Madison, WI

B.S. Major in Computer Science | B.S. Major in Data Science

August 2019 – May 2022 (expected)

Major GPA: 3.95 | Cumulative GPA 3.71

- Relevant Completed Coursework: Advanced Programming in Java; Discrete Mathematics; Computer Engineering; Applied Statistics for Engineers; Introduction to Artificial Intelligence; Machine Organization and Programming; Introduction to Operating Systems; Introduction to Algorithms; Introduction to Data Modeling
- Current Coursework: Software Engineering; Introduction to Human-Computer Interaction; Introduction to Computer Networks; Genetics in the News; Introduction to Data Modeling II

SKILLS

Programming: Java, Python, JavaScript, HTML, CSS, C, R

Technologies: React, Node.js, Jekyll, Git (CLI), Storybook & Chromatic, scikit-learn, tidyverse

PROJECTS

Projects were selected to show a variety of project topics and programming languages. Check out more on my website or GitHub.

- Lightbulb: Created a collaboration tool to connect people looking to work on projects. Competed in 2021 Transcend Competition (React, Node.js, Express).
- Personal Website: Set up a personal website using Jekyll, a tool to build lightweight static web pages. Created python script to scrape GitHub information (Jekyll, Liquid, Python).
- Blindwrite Clone: Created an online web app that allows users to blur their writing to avoid constant self-editing and hopefully avoid writers block (plain HTML, CSS, JavaScript).
- Steam Hours: Created scripts to interact with the Steam API and analyzed data with R (Python, R).
- Handwritten Digit Classifier: Created a neural network from scratch to learn how neural networks work (Java).

EXTRACURRICULAR ACTIVITIES

- Co-Leader, FoodShed (Coding for Good): Created an app for the campus club FoodShed that collects free (surplus) food. Built with Ionic and Angular (Typescript, Angular, Ionic).
- Member, Causal Architecture (AI Club): Learned a theoretical approach of natural and artificial intelligence by reading research papers.
- Member, Coding for Good Website: Contribute to the website for the Coding for Good club (EJS, JavaScript, HTML).
